Frequently Asked Question:

• **How often do I need my A/C re charging?**
Typically Every 2/ 3 years.

• **Where does my Gas go?**
No system is 100% gas tight! ,so slight leakage through seals or perished hoses. Or a main leak!

• **What Gas does it use?**
*Originally a gas Called R12 (Not Good!)
Currently R134a, however from 2014 R1234a.
Environmentally Friendlier!*

• **Do I have to use my A/C through winter also?**
Most Auto climate control systems will automatically select A/c or not! The A/C system does assist in dehumidifying windows and maintain a constant temperature you select.

Most modern systems use a "Variable Displacement Compressor"... an Air conditioning pump that runs all the time, however only pumps the gas around that is required,,clever eh!? (Fuel Consumption hardly effected!)

Call in for further advice or A/C health check!
